FOREWARD

A comprehensive state economic abstract cannot be the product of a single individual. Many people are required to manage the varied data resources; compile and design the tables, charts and graphs; and to type and proof these many sheets that will become the finished abstract. However, throughout the effort there must be a guiding force to encourage and direct these many steps to insure the polished and timely completion of the final product.

The Center for Business and Economic Research of The University of Alabama has been maintaining and analyzing socioeconomic data since 1930. And while these past 50 years have seen many changes, the past 30 years have also seen a remarkable constancy. Carolyn Sawyer joined the Center staff in 1946. Since that time, Carolyn has served the University and the people of Alabama bringing great credit to herself and to the Center. As a Research Associate, Carolyn has worked on every abstract. And in recent years, she has directed the planning as well as compiling and designing most of the tables.

The Center staff and I recognize and appreciate Carolyn's contributions to the professional life of the Center. And, as with most endeavors, the press of time often prevents us from really expressing the appreciation we feel for a job well done. In recognition of her years of loyal and devoted service, this 1982 Economic Abstract of Alabama is dedicated to Mrs. Carolyn Sawyer.

In addition, the Center is truly fortunate to have an exceptional staff that takes great pride in its work. It is time for these efforts to be publicly acknowledged. Let this abstract serve to recognize the entire CBER staff for its commitment to service and excellence. They have earned the respect of all with whom they work. Thank you for a job well done.

Carl E. Ferguson, Jr.
Director

ALABAMA GROSS STATE PRODUCT/ECONOMIC INDICATORS

Historical measures of Alabama Gross State Product (GSP)/Economic Indicators for 1976-79 and projected GSP for the years 1980-85 are presented in the following pages. The GSP, measuring the total value of goods and services produced in Alabama, is a primary indicator of the economic health of the state. Analysis of the various components of GSP can assist policy and decision makers from both the public and private sectors in evaluating past economic performance and future opportunity.

The annual Alabama Econometric Model (AEM), used to generate the forecasts, consists of more than one hundred mathematical equations. The model predicts future economic conditions using historical data for the state and the nation, forecasted levels of national economic activity, and selected state policy variables. Forecasts of national activity are provided by Wharton Econometric Forecasting Associates. Alabama Econometric Model forecasts for GSP and its components are subject to change as more current or revised historical data become available and expectations for the national economy change.

Analyses and additional tables related to the data in this section are published in Alabama Economic Outlook, 1982. Copies of this publication may be obtained from Office of State Planning and Federal Programs, State Planning Division, State Capitol, Montgomery, Alabama 36130.

ALABAMA GROSS STATE PRODUCT/ECONOMIC INDICATORS

CONTINUED

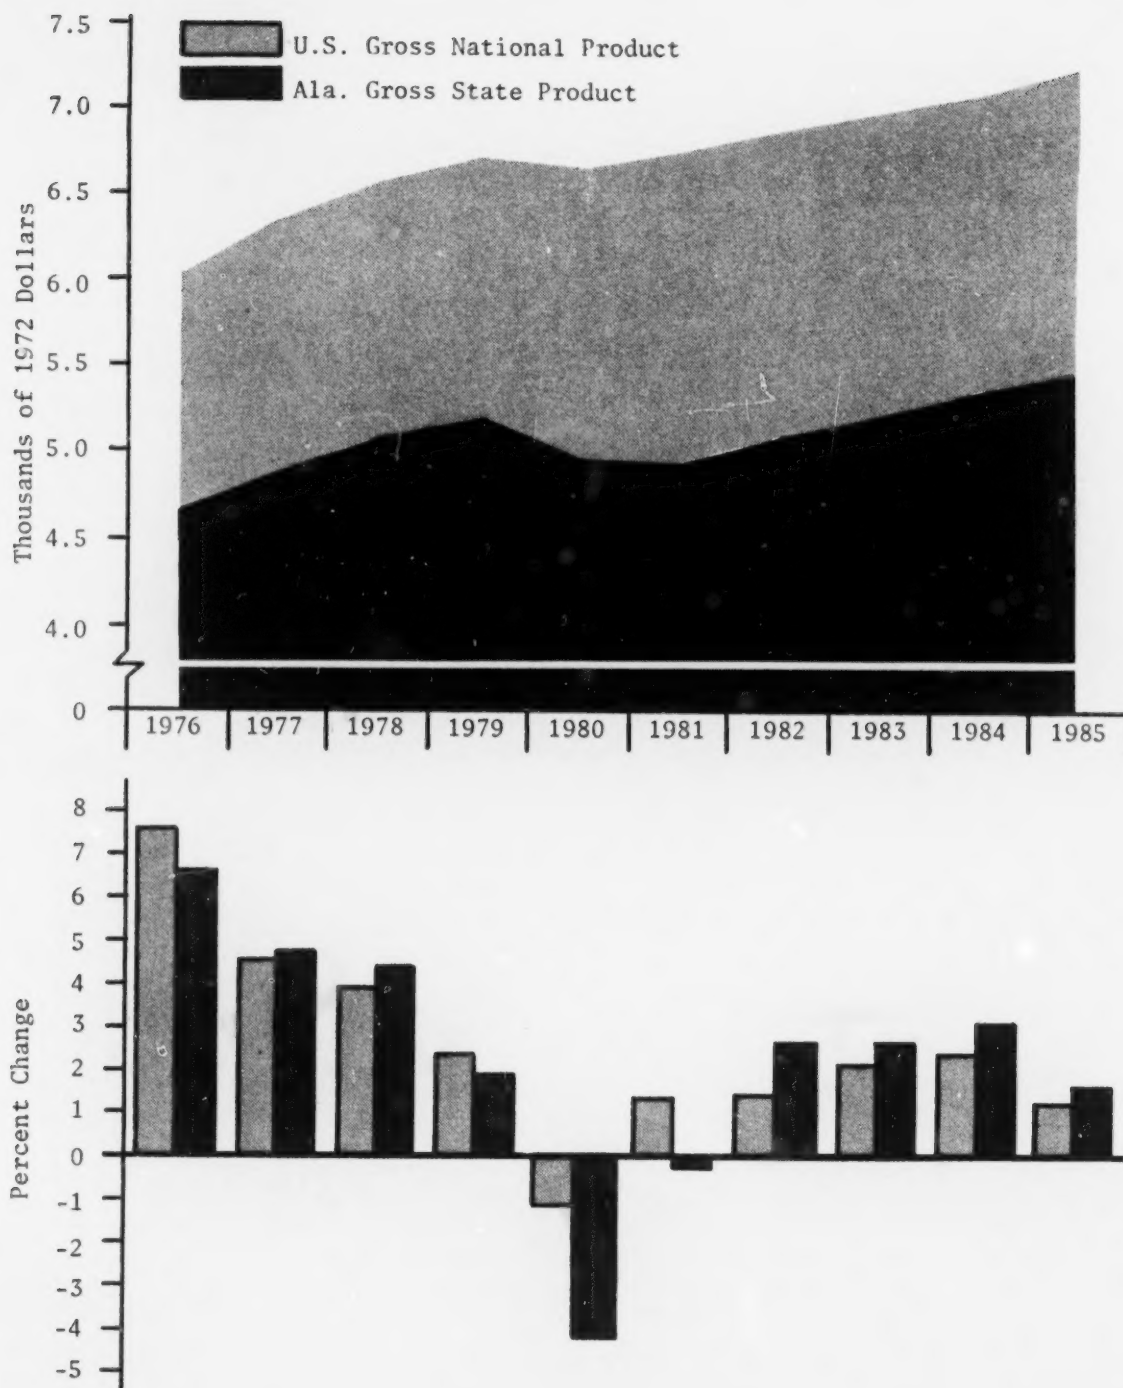

Definitions of selected terms used in the accompanying tables are:

Current dollars--Ordinary dollars exchanged in daily commerce, not adjusted for the effects of inflation. These are also referred to as "nominal" dollars.

Constant dollars--"Real" dollars expressed in constant value, adjusted for the effects of inflation. All AEM constant figures are in 1972 dollars.

Disposable income--Total personal income less State and Federal income tax. It is the total income available to individuals to dispose of as they choose and is a measure of the overall buying power of consumers.

POPULATION

The Bureau of the Census, U.S. Department of Commerce, is the most comprehensive basic source for population data. It is a general-purpose statistical agency whose primary function is to collect, process, compile, and disseminate statistical data for use by all persons or agencies. Most of the data in this section was derived from or based on the Census figures.

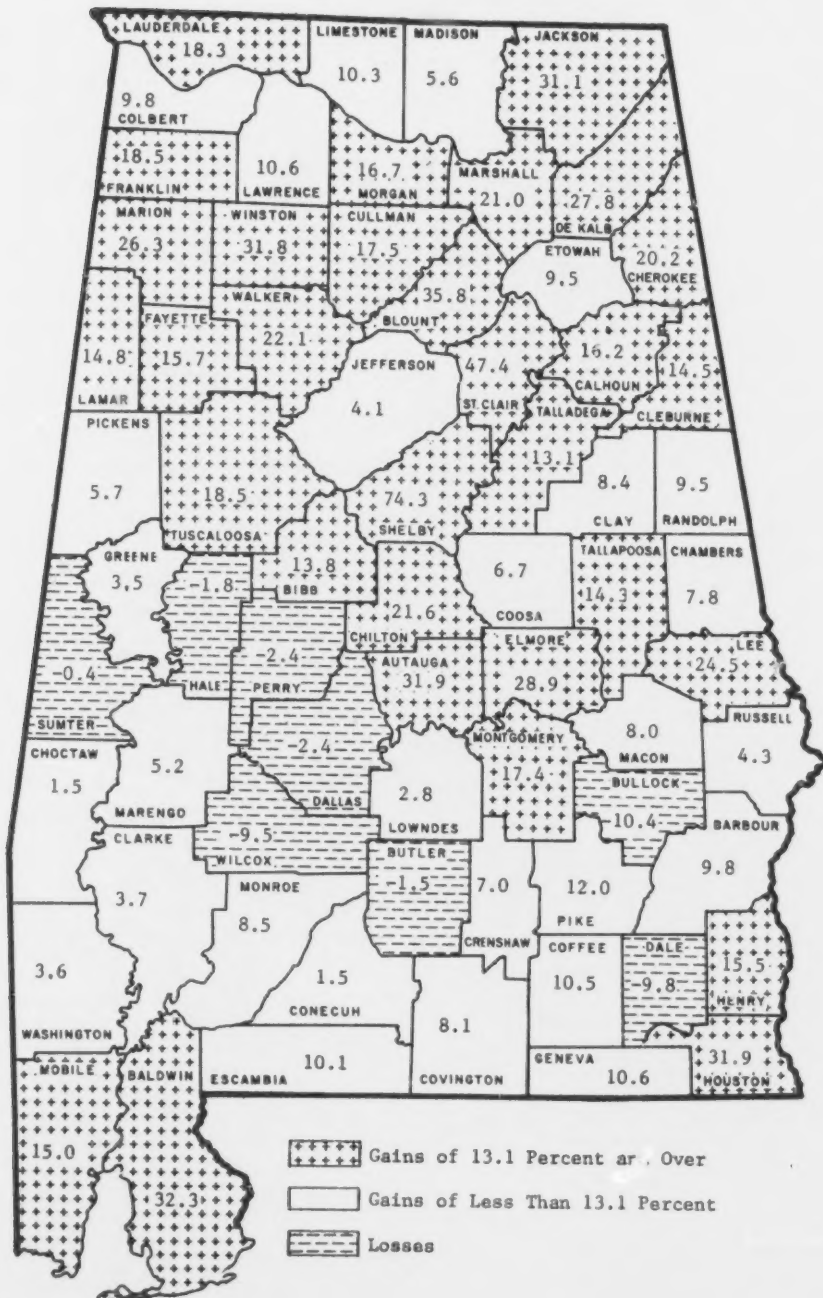

Since 1790 the Census Bureau has been taking a decennial census, attempting to make a complete count of all persons by their place of residence. General characteristics, such as number of persons by age, race, sex, household relationship, etc., are provided on 100 percent basis; whereas, the social and economic characteristics (education, employment, income, etc.) are made available from representative samples of the population.

The 1980 population data, included in this Abstract, was the only 1980 Census data available at the time this Abstract went to press. However, all of the 1980 Alabama census tapes and printed reports will be available from the Alabama State Data Center, Center for Business and Economic Research, as soon as they are released by the Census Bureau. The Census geography covered in these tapes and reports include such areas as the state, metropolitan statistical areas, counties, cities, county census divisions, census tracts, enumeration districts, and blocks.

POPULATION--CONTINUED

Intercensal county population estimates are prepared jointly by the Bureau of the Census and Center for Business and Economic Research (CBER) under the auspices of the Federal-State Cooperative Program for Local Population Estimates and published each year in Current Population Reports, Series P-26. Federal Revenue Sharing population estimates for counties and places appear in Series P-25 as they become available.

Autauga County	18,739	24,460	28,600	28,600	28,900	29,200	29,900	32,259
Elmore County	30,524	33,661	39,800	39,800	40,700	41,700	43,500	43,390
Montgomery County	169,210	167,790	180,700	183,700	184,600	186,700	191,200	197,038
Tuscaloosa	109,047	116,029	122,400	123,800	123,800	125,400	127,800	137,541
Tuscaloosa County	109,047	116,029	122,400	123,800	123,800	125,400	127,800	137,541

NOTE: The figures for 1960, 1970, and 1980 are actual census counts as of April 1; 1975-1979 are estimates as of July 1.

* In October 1963, the Office of Management and Budget added Limestone, Baldwin, and Elmore Counties to the respective SMSAs of Huntsville, Mobile, and Montgomery; in March 1967, Shelby and Walker Counties were added to the Birmingham SMSA; and in December 1971, Florence SMSA was established and was comprised of Colbert and Lauderdale Counties. In 1973, Anniston SMSA, consisting of Calhoun County, was established; St. Clair County was added to the Birmingham SMSA; Marshall County was added to the Huntsville SMSA; and Autauga County was added to the Montgomery SMSA. The population figures shown here reflect the current SMSA delineations and thus do not agree with the published figures in the census reports for all years.

^P Provisional estimates.

VITAL STATISTICS

The Alabama Department of Public Health, Bureau of Vital Statistics, is the principal collector and supplier of vital statistics data for Alabama. This agency maintains and publishes detailed natality and mortality data by county and selected places as well as summary county data for marriages and divorces. Publications presenting these data are Alabama's Vital Events (annually) and Alabama Vital Statistics Quarterly Report.

Vital statistics are compiled for the country as a whole by the National Center for Health Statistics (NCHS) and published annually in Vital Statistics of the United States and monthly in Monthly Vital Statistics Report.

Each of these references contain registrations of the events for recorded, or place of occurrence, data as well as resident, or place of residence, data.

EDUCATION

The Alabama Department of Education is the major source of education statistics in the State. Its Annual Report provides information on the county and city school systems under their jurisdiction. Included is such items as school enrollment by grades and race, attendance, transportation, teaching personnel, revenues and receipts, and payments. Limited data are published for vocational education and rehabilitation, higher education state institutions, and private schools in this report.

Decennially the U.S. Bureau of the Census collects and publishes in the Census of Population selected information on school-age population, enrollment, and number of school years completed of persons 25 years old and over. These data are for the state, standard metropolitan statistical areas, counties, and cities with 2,500 or more population.

Other annual, biennial, and periodic survey statistics on education are provided by the National Center for Education Statistics (NCES) of the U.S. Department of Health, Education, and Welfare (HEW), U.S. Office of Education, and National Education Association (NEA).

EMPLOYMENT

Employment data can be obtained from a great number of sources, but there are three principal sources for Alabama data: (1) the Alabama Department of Industrial Relations; (2) the U.S. Department of Labor, Bureau of Labor Statistics and Bureau of Employment Security; and (3) the U.S. Department of Commerce, Bureau of the Census.

The Alabama Department of Industrial Relations (ADIR) compiles and publishes current estimated employment and labor force statistics in numerous publications. Their Annual Report includes data on employment service activities, unemployment compensation, Federal programs, finance, and child labor. Many of these data are also available in other publications and special releases of this office, such as: Statistical Bulletin (monthly); Alabama Labor Market News (monthly); and Labor Market News for counties and employment office areas in Alabama (monthly, bimonthly, or periodic basis). Most of the tables in this Abstract are drawn from these sources or other ADIR publications.

The U.S. Department of Labor, Bureau of Labor Statistics (BLS), collects and publishes a wide variety of current statistics on employment and wages of the labor force. Two valuable monthly periodicals available through BLS are the Monthly Labor Review, which summarizes data on a national and regional basis, and Employment and Earnings, which contains data by states as well as the nation. Employment and Earnings Statistics for States and Areas is published annually by BLS to bring together current and historical data on employment, hours, and earnings of production workers in the states and

EMPLOYMENT--CONTINUED

metropolitan areas. Many of the more detailed data are published in special reports and bulletins too numerous to list here.

The U.S. Department of Commerce, Bureau of the Census, makes available some of the most widely used statistics. The following list may be used as a guide to the more frequently used census sources.

Census of Population--Printed reports give detailed data for the state, counties, standard metropolitan statistical areas (SMSAs), urbanized areas, urban places with population of 10,000 or more, and census tracts; whereas, data for smaller areas are available from the Census tapes through the Alabama State Data Center, Center for Business and Economic Research. Included is data such as: employment status by sex, labor force status by age and sex, weeks worked, class of worker employed by sex, occupation of unemployed by sex, industry of employed, industry of employed females, place of work, means of transportation to work, income of persons, and earnings of persons by selected occupation groups and sex.

Census of Retail Trade--Provides data every five years on employees and payroll for the state, counties, SMSAs, cities with 2,500 or more inhabitants, and cities with 500 or more establishments.

Census of Wholesale Trade--Offers quinquennial data on employees and payroll for the state, counties, SMSAs, cities with 200 or more establishments, and cities with 2,500 or more inhabitants.

EMPLOYMENT--CONTINUED

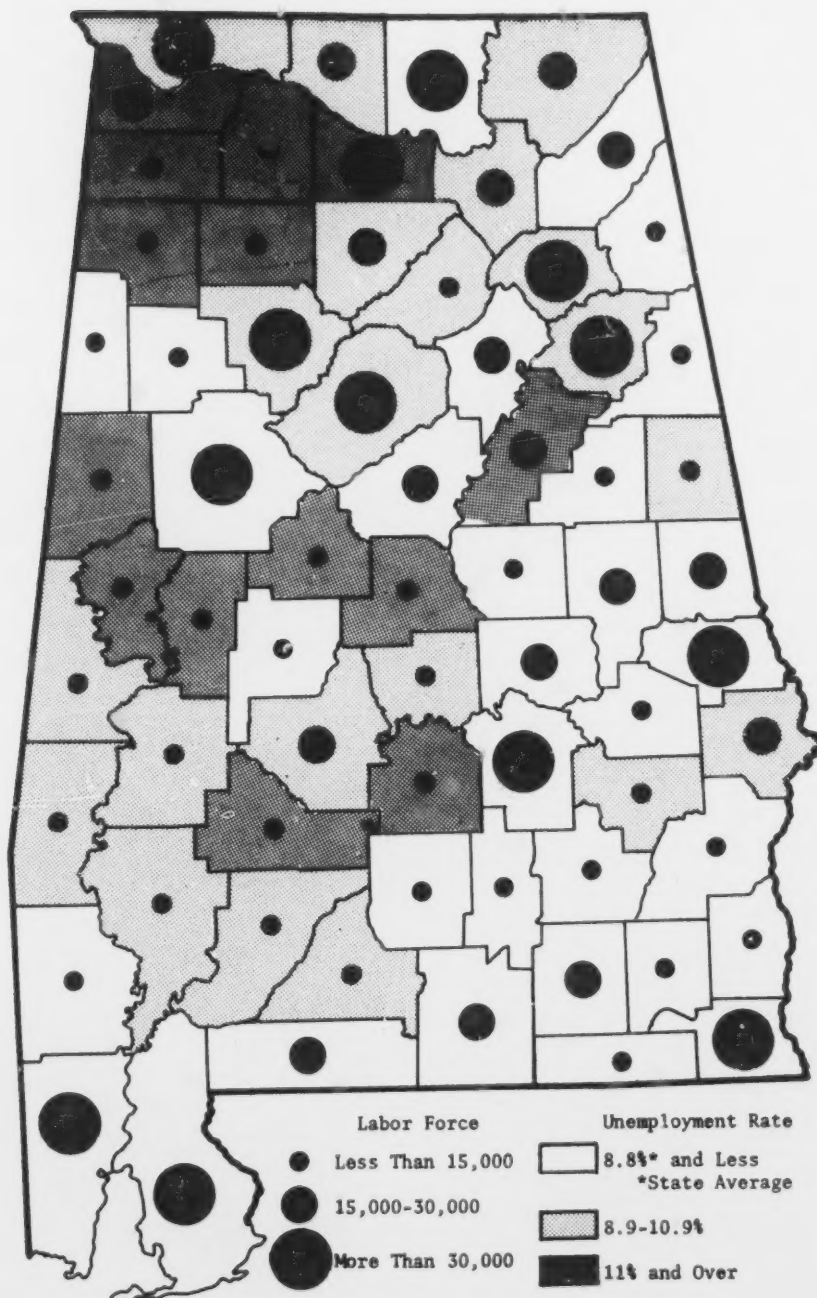

Census of Selected Services--Presents data for years ending in 2 and 7 on employees and payroll for the state, counties, SMSAs, cities with 200 or more establishments, and cities with 2,500 or more inhabitants.

Census of Manufactures--Contains data every five years on employees and production workers for the state, counties, SMSAs, and selected cities. The Annual Survey of Manufactures contains the same type data for intercensal years for the state and selected counties.

Census of Agriculture--Gives farm labor data for the state and counties at five year intervals.

County Business Patterns--Provides employment data obtained from the Social Security Administration Form 941, Schedule A, payroll data from Internal Revenue Service Form 941, and multilocation firms from the Census annual Organization Survey. This series presents annual data on number of employees, taxable payrolls, and reporting units (by employment-size class) for the state and counties by standard industrial classification (SIC).

NOTE: Civilian labor force, total employment, unemployment, and unemployment rates are by place of residence, whereas nonagricultural wage and salary employment is by place of work. Employment and unemployment estimates have been adjusted to Current Population Survey benchmarks. Data are final based on the preceding year's benchmark.

^PPreliminary.

¹Excludes proprietors, self-employed persons, workers in private households, and unpaid family workers. Includes all full and part-time nonagricultural wage and salary employees who worked during, or received pay for any part of, the pay period which includes the 12th of the month.

²Includes furniture and fixtures, professional instruments, and miscellaneous durable goods.

³Includes leather and leather products, tobacco manufactures, and products of petroleum and coal.

⁴Includes those services related to agriculture, forestry, and fisheries.

NOTE: County figures do not necessarily add to State totals, due to rounding and to inclusion of some units in "all other" county distributions to avoid disclosure of individual firm data. Industry totals include data for all units so classified.

* Average monthly employment in firms covered under the Unemployment Compensation Law, e.g., establishments employing one or more workers.

** Federal Government data excluded.

*** Data could not be allocated by county.

**** Included in "all other" to avoid disclosure of operations of individual reporting units.

NOTE: County figures do not necessarily add to State totals, due to rounding and to inclusion of some units in "all other" county distributions to avoid disclosure of individual firm data. Industry totals include data for all units so classified.

* Total wages paid to workers in firms covered under the Unemployment Compensation Law, e.g., establishments employing one or more workers.
** Federal Government data excluded.

*** Data could not be allocated by county.

**** Included in "all other" to avoid disclosure of operations of individual reporting units.

INCOME AND PRICES

Income data for the State come almost exclusively from two Bureaus, Bureau of Economic Analysis and Bureau of the Census, within the U.S. Department of Commerce. On the other hand, prices paid for goods and services, both consumer and producer (formerly wholesale), are collected and made available by the Bureau of Labor Statistics (BLS), U.S. Department of Labor. Additional price data, such as prices received and paid to farmers, are provided by the U.S. Department of Agriculture and its state affiliates.

The primary source for personal and per capita personal income is the Bureau of Economic Analysis (BEA). These data are available for the U.S., state, standard metropolitan statistical areas (SMSA), and counties from the Survey of Current Business and computer tape, microfiche, or printouts from the Center for Business and Economic Research (CBER), The University of Alabama. Family income statistics are provided by the Census Bureau as a result of the decennial censuses and special surveys. These are available through the census tapes or publications, such as Census of Population or Current Population Reports, Series P-60 (State income and education surveys) and Series P-25 (Federal Revenue Sharing estimates of per capita money income for state, counties, and places).

Prices and price indexes, consumer and producer, generated by the Bureau of Labor Statistics are the most comprehensive measures of price changes available. Consumer price indexes are available monthly for two series,

INCOME AND PRICES--CONTINUED

all urban consumers and urban wage earners and clerical workers, for the United States average and selected major cities; whereas, the producer prices, broken down by commodities, are only for the nation as a whole. Since individual state data are not available the U.S. average is normally used and, therefore, published in this section.

A quarterly inter-city index measuring the relative price levels, compared to a national average, in selected cities has been developed and is available from American Chamber of Commerce Researchers Association. This index does not measure price changes through time but does provide a means of measuring the inter-city cost of living on a quarterly basis.

In order to help the user of the personal income data in this section a list of definitions are presented below:

Definition of terms:

State personal income--The current income received by residents of the states from all sources, inclusive of transfers from government and business but exclusive of transfers among persons. It is measured before deduction of income and other direct personal taxes, but after deduction of personal contributions to social security, government retirement, and other social insurance programs. While cash income makes up the overwhelming bulk of the total, personal income also includes several types of nonmonetary income (income in kind, including tips and bonuses as well as contractual compensation).

Disposable personal income--The income remaining to persons after payment of personal taxes. It is the concept closest to what is commonly known as "take-home pay" (i.e., the amount which individuals can use to make personal outlays or to save).

Per capita income--Derived by dividing total personal income by total population.

INCOME AND PRICES--CONTINUED

Wage and salary disbursements--Consist of the monetary remuneration of employees commonly regarded as wages and salaries, inclusive of executives' compensation, commissions, tips, bonuses, and the value of payments in kind which represent income to the recipient. They are measured before deductions for social security contributions, union dues, or other purposes.

Other labor income--Consists of supplementary types of labor income paid out or accruing in the current period, such as employer contributions to pensions and welfare under privately administered workmen's compensation insurance and director's fees.

Proprietors' income

Farm proprietors' income--Derived from the gross income of farmers minus their total expenses of production.

Nonfarm proprietors' income--Comprised of income of unincorporated enterprises and inventory valuation adjustment.

Dividends, interest, and rent

Dividends--Cash payments by corporations organized for profit to U.S. resident stockholders.

Interest--Monetary and imputed interest income of persons from all sources.

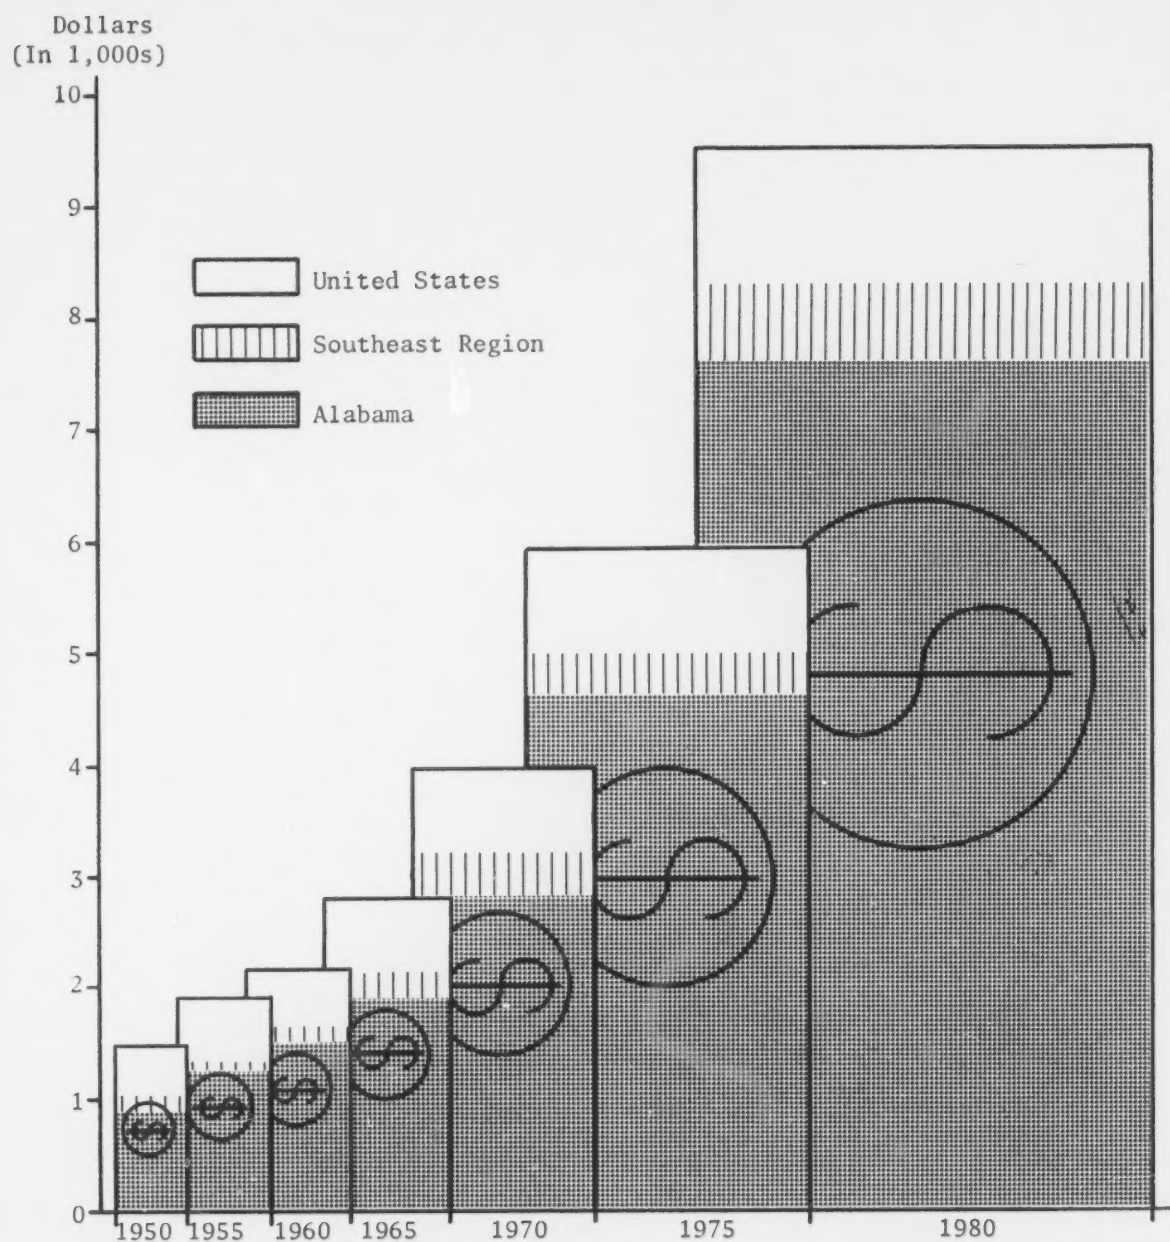

Rent--Monetary and imputed income of persons from the rental of real property except those primarily engaged in the real estate business.

Transfer payments--Consist of disbursements to persons for which no services are currently rendered, such as unemployment benefits, social security payments, veterans benefits, welfare and relief payments, food stamps, black lung, consumer bad debts, gifts to nonprofit institutions, and other such payments.

Personal contributions for social insurance--Contributions made by individuals under the various social insurance programs. (Payments by both employees and self-employed are included.)

Residence adjustment--Factor used to adjust wage and salary disbursements, other labor income, and personal contributions for social insurance from place of work to place of residence.

TABLE 54. PERSONAL INCOME BY MAJOR SOURCES 1974 - 1979--CONTINUED

(D) Not shown to avoid disclosure of confidential information, data are included in totals.

(L) Less than \$50,000, data are included in totals.

1/ Estimates based on 1967 SIC.

2/ Estimates based on 1972 SIC.

3/ Consists of wage and salary disbursements, other labor income, and proprietors' income. Primary source for private nonfarm: ES-202 covered wages--Alabama Department of Industrial Relations.

4/ Includes wage and salaries of U.S. residents working for international organizations.

5/ Includes wage and salaries of U.S. residents working for international organizations.

6/ Includes the capital consumption adjustment for rental income of persons.

Source: U.S. Department of Commerce, Bureau of Economic Analysis, Regional Economics Information System.

NOTE: Data compiled from Spring 1976 Survey of Income and Education. Families and persons 14 years old and over as of Spring 1976. Family data for race, age and occupation characteristics are for husband in husband-wife families and head in other families.

* Less than approximately 60 sample cases.

** Restricted to civilian persons.

*** Includes other service workers, not shown separately.

BANKING AND FINANCE

Banking and finance statistics are available from many federal and state agencies as well as individual banks, associations, and organizations. Some of the major federal government agencies that collect and disseminate these data are the Federal Reserve System, Board of Governors; Federal Deposit Insurance Corporation (FDIC); National Credit Union Administration; U.S. Department of the Treasury, Office of the Comptroller of the Currency; Federal Savings and Loan Insurance Corporation; and Federal Home Loan Bank Board.

The banking data in this section was obtained from the Board of Governors of the Federal Reserve System quarterly computer tapes. The principal source for the other financial data for Alabama included is the Alabama Department of Revenue; although, other State Departments collect and make available many state financial items.

Several other sources for governmental finances are:

U.S. Department of Commerce, Bureau of the Census

Census of Governments (quinquennial--years ending in 2 and 7)

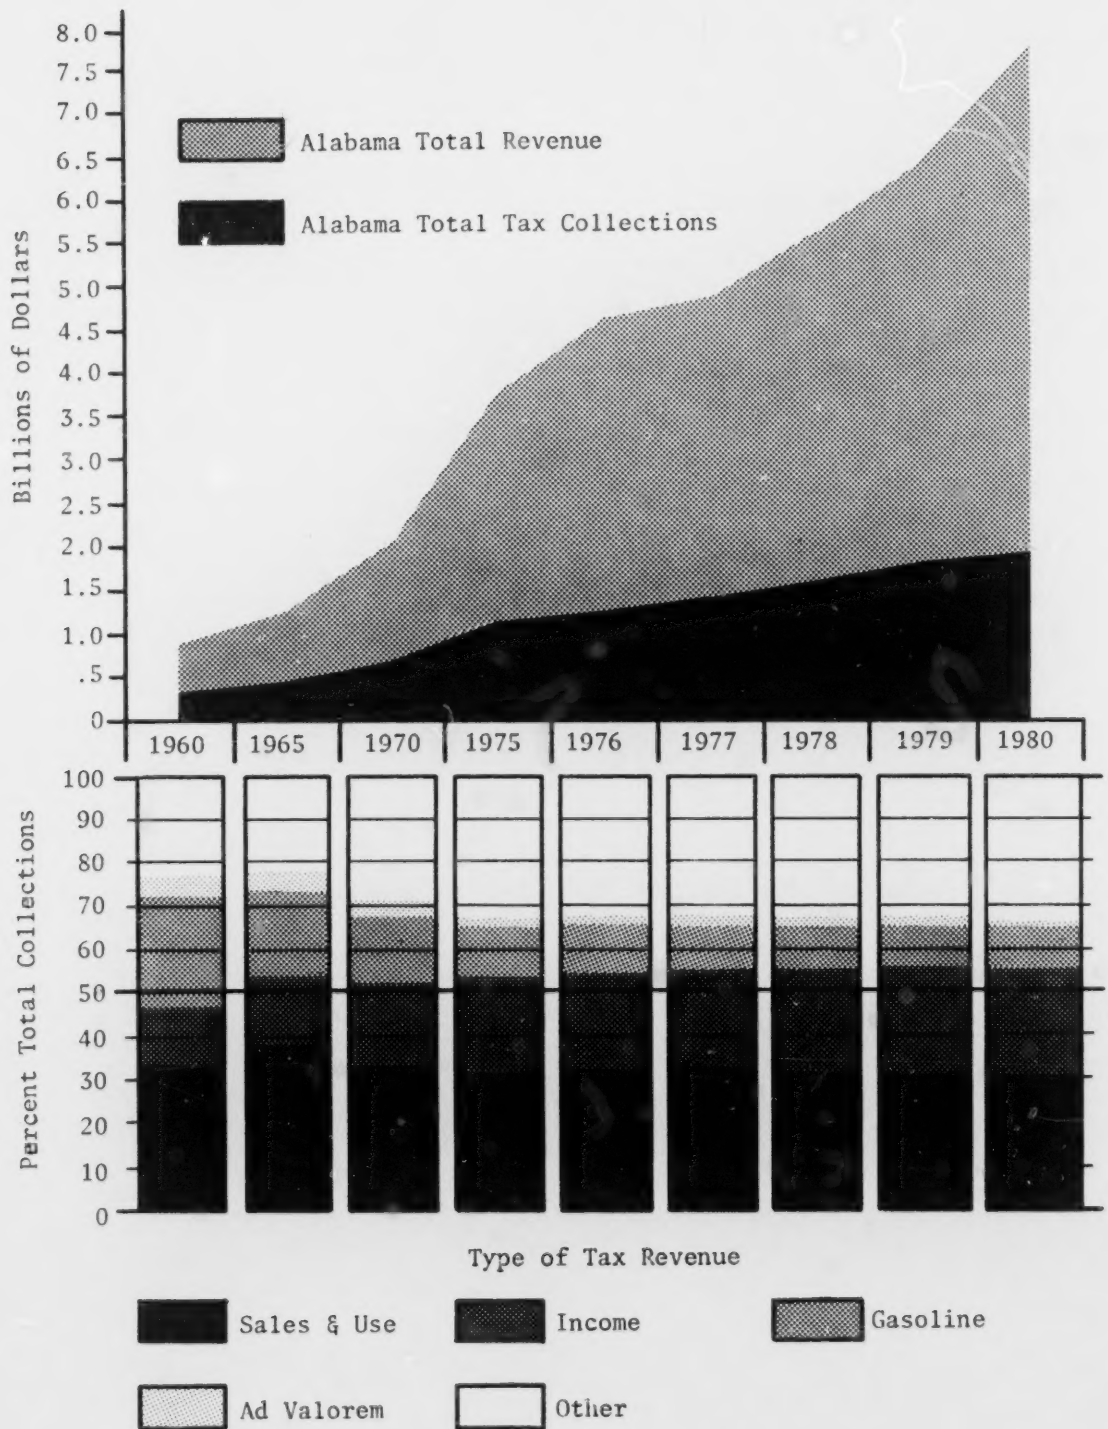

Current Government Reports

Series GE:	Government Employment (Annual)
Series GF:	Government Finances (Annual)
Series GC:	Construction Expenditure of State and Local Governments (Quarterly)
Series GT:	Quarterly Summary of State and Local Tax Revenue (Quarterly)
Series GSS:	Special studies (periodic)

Tax Foundation, Inc.

Facts and Figures on Government Finance (Annual)

CONSTRUCTION AND HOUSING

Primarily, construction statistics come from the U.S. Bureau of the Census. The Census of Construction Industries, conducted every five years, concentrates on the activities of industries that operate as general contractors, operative builders, special trades contractors, land dividers and developers. On the other hand, another part of the Census Bureau's Construction Division concentrates on the collection and dissemination of building permit data.

The building permit data are collected monthly from all the permit-issuing places in the United States. It is then compiled by State and the number of permits are published in Construction Reports, C-40, while more detailed data is distributed to depositories in each State. The Center for Business and Economic Research is designated as the Alabama depository.

Another source for monthly construction contracts awarded, by state, is available from F. W. Dodge Division of McGraw-Hill Information Systems Company.

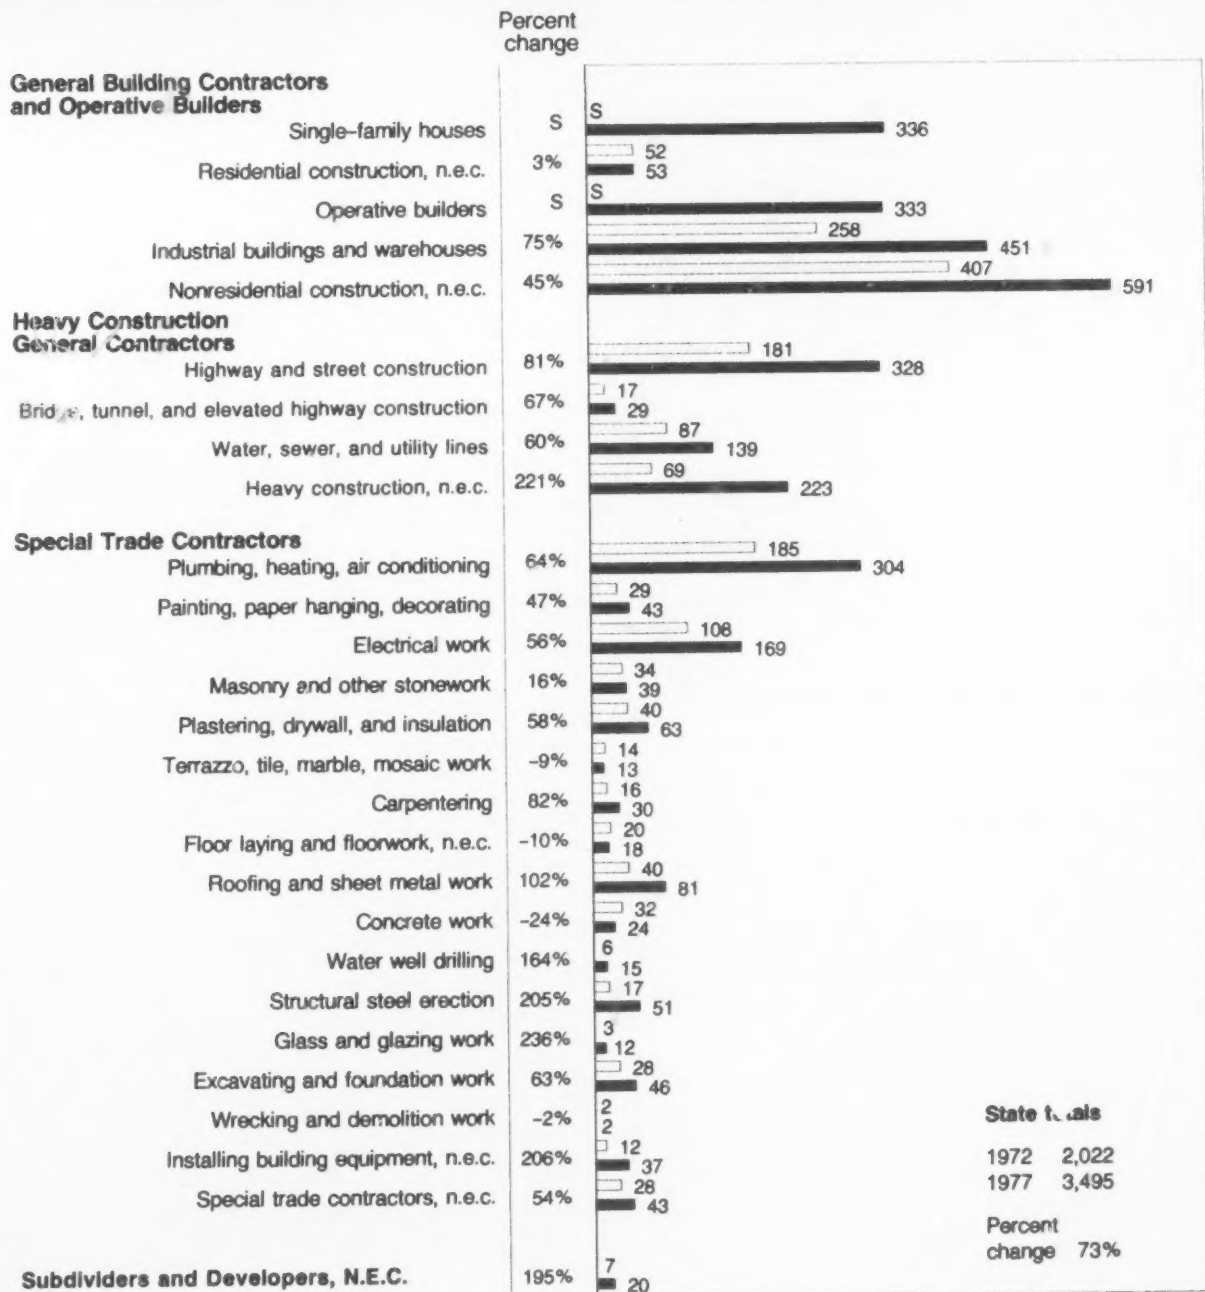

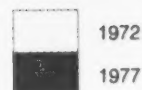

The major source for housing data is the Census Bureau. Since 1940 they have been conducting a decennial census of housing in conjunction with the census of population. As a result more data on housing for the state, standard metropolitan statistical areas, counties, places, and small areas have been made available through printed reports, census tapes, and microfiche.

ENERGY

This section presents statistics on the production and consumption of energy in Alabama. The principal sources involved are U.S. Department of Energy, Energy Information Administration; U.S. Department of the Interior, Bureau of the Mines; Edison Electric Institute; Alabama Department of Industrial Relations, Division of Safety and Inspection; and State Oil and Gas Board.

Although not included, the U.S. Bureau of the Census collects a substantial amount of energy-related data in its censuses and surveys that are not primarily focused on energy. Below are brief statements on the type of data in some of the Census Bureau's publications.

Census of Mineral Industries--Detailed information on coal mining and oil and gas operations.

Census of Manufactures and Annual Survey of Manufactures--Information on petroleum and related industries including cost of fuels purchased and consumption of fuels and electric energy by industry groups.

Census of Construction Industries--Data on the cost of fuels and electricity purchased by type of contractor are in the 1977 census.

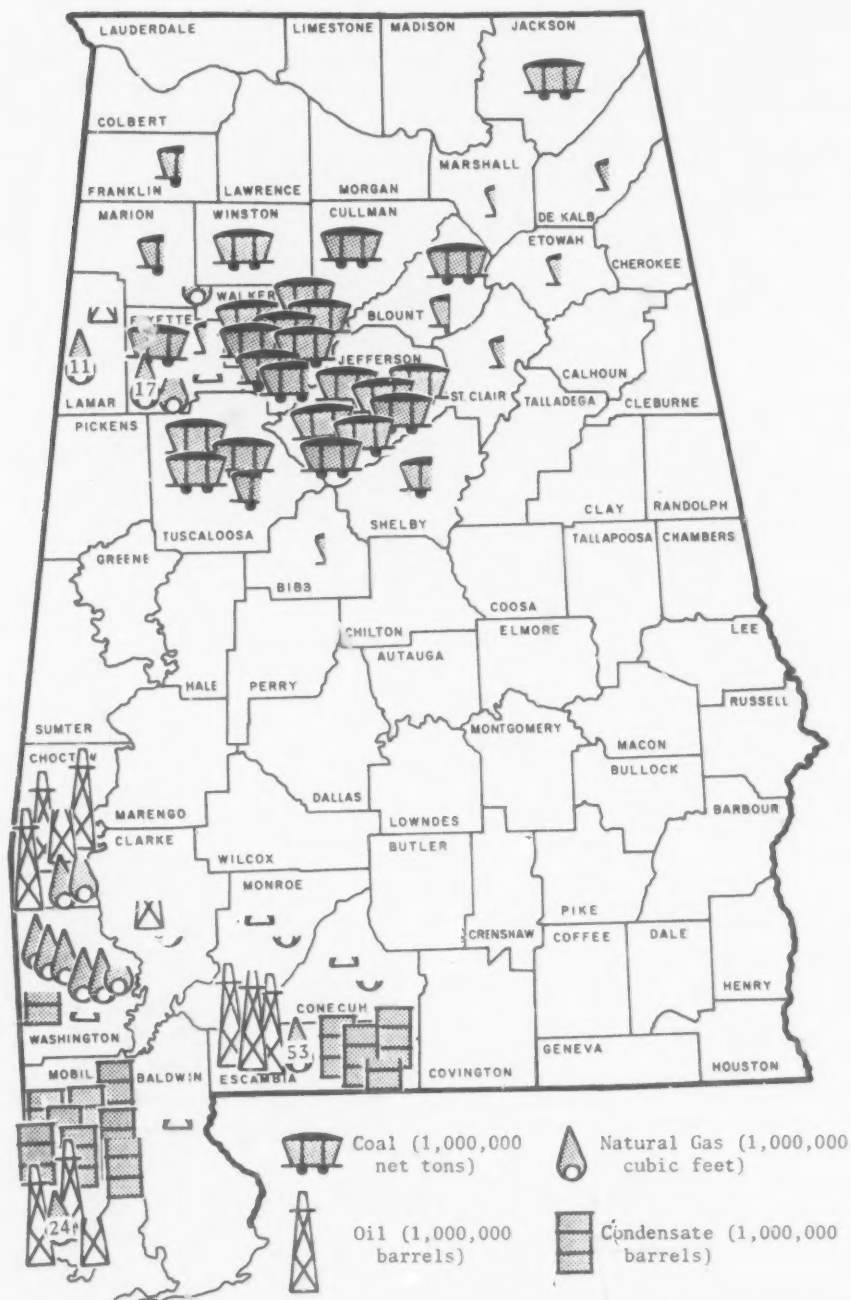

Censuses of Retail Trade, Wholesale Trade and Selected Service Industries--General statistics, including sales or receipts, of firms involved in the distribution of fuels.

Current Industrial Reports--The Annual Survey of Oil and Gas provides data on the exploration and development, sales volume, revenue, and assets for crude petroleum and natural gas. Other monthly, quarterly, annual, and biennial reports present energy consumption information.

ENERGY--CONTINUED

Foreign Trade Reports include foreign import and export data for energy-related commodities. The Center for Business and Economic Research processes the data from the waterborne commerce SM 305 and SM 705 reports for all the ports in the Mobile Customs District. Included is the value and shipping weight of waterborne shipments of imports and exports for commodities by country of origin and destination. Refer to "Foreign Trade" section for sample data.

NOTE: Totals may not equal sum of components due to independent rounding. Totals do not include wood derived fuel consumed by the pulp and paper industry which amounted to an estimated 1.0 quadrillion Btu in the United States in 1978. Also excludes small quantities of other energy sources for which consistent historical data are not available, such as solar energy obtained by the use of thermal and photovoltaic collectors; wind energy; and geothermal, biomass, and waste energy other than that consumed at the electric utilities.

* Includes industrial and utility production and net imports of electricity.

** Liquefied petroleum gases include ethane, ethylene, propane, propylene, butane, butylene, butane-propane mixture, ethane-propane mixture, and isobutane.

NOTE: Totals do not include wood derived fuel consumed by the pulp and paper industry, if any, which amounted to an estimated 1.0 quadrillion Btu in the United States in 1978. Also excludes small quantities of other energy sources for which consistent historical data are not available, such as solar energy obtained by the use of thermal and photovoltaic collectors; wind energy; and geothermal, biomass, and waste energy.

* Liquefied petroleum gases include ethane, ethylene, propane, propylene, butane, butylene, butane-propane mixture, ethane-propane mixture, and isobutane.

NOTE: Totals may not equal sum of components due to independent rounding. Excludes small quantities of other energy sources for which consistent historical data are not available, such as solar energy obtained by the use of thermal and photovoltaic collectors; wind energy; and geothermal, biomass, and waste energy.

* No anthracite is consumed by the transportation sector.

** Liquefied petroleum gases include ethane, ethylene, propane, propylene, butane, butylene, butane-propane mixture, ethane-propane mixture, and isobutane.

MANUFACTURING

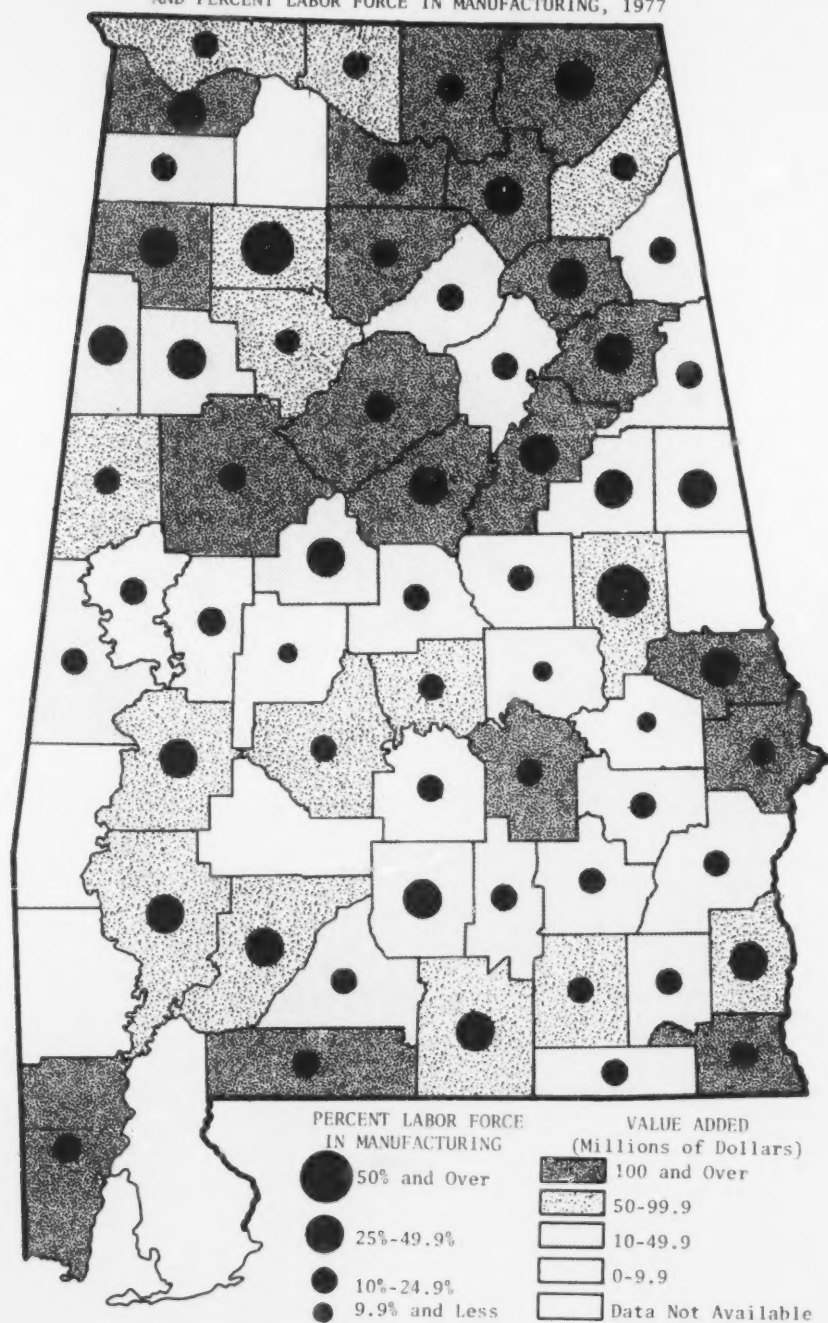

The U.S. Bureau of the Census gathers, compiles, and publishes information on the manufacturing activity in three principal ways: Census of Manufactures, taken every 5 years (years ending in 2 and 7); Annual Survey of Manufactures, for intercensal years; and Current Industrial Reports, a series of annual, quarterly, and monthly surveys.

The major categories of data for states and small areas in the Census of Manufactures are number of establishments, employment, payrolls and wages, manhours, value added by manufacture, value of shipments, and new capital expenditures. Most of the 1977 census data for Alabama is presented in this section. More detailed census information for major industry groups and specific products are available for the nation in other publications or volumes such as Summary and Subject Statistics, Industry Statistics, Area Statistics, and Location of Manufacturing Plants.

The Annual Survey of Manufactures provides much of the same type of data for the nation, states, and selected areas as the Census but for the years between the quinquennial censuses. Both the survey and the census includes data on the type of fuel and energy consumed by industries.

Current information on detailed commodities for the United States and states, when available, can be found in the numerous Current Industrial Reports. These reports are published for the individual products.

¹In annual survey of manufactures (ASM) years, data are estimates based on a representative sample of establishments canvassed annually and may differ from results of a complete canvass of all establishments. ASM publication shows percentage standard errors. Unless otherwise noted, for data prior to 1963, see 1963 Census of Manufactures, vol. III, table 1 of State chapter.

²Including central administrative offices and auxiliaries (for definition, see appendix B).

³Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (Z) Less than 50 thousand dollars or hours; under 50 employees.
¹ Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.
² Including central administrative offices and auxiliaries (for definition, see appendix B).
³ Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

-	Administrative and auxiliary -----	-	79	43	5.4	88.9	-	-	-	-	-	-	-	(NA)	(NA)

Note: "All industries" level includes data on number of establishments, total employment, and total payroll for central administrative offices and auxiliaries (for definition, see appendix B).

¹Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (Z) Less than 50 thousand dollars or hours; under 50 employees.

²Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those industry groups and industries where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

³Statistics for some industry groups and industries are withheld to avoid disclosing figures for individual companies. However, for such industry groups and industries with 150 employees or more, number of establishments is shown and employment size range is indicated by one of the following symbols: AA—150 to 249 employees; BB—250 to 499 employees; CC—500 to 999 employees; EE—1,000 to 2,499 employees; FF—2,500 employees or more. Statistics for industry groups shown include data for all component industries, regardless of whether data are shown for individual industries in the group.

⁴Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

Note: "All industries" level includes data on number of establishments, total employment, and total payroll for central administrative offices and auxiliaries (for definition, see appendix B).
- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (S) Withheld because estimate did not meet publication standards.
(Z) Less than 50 thousand dollars or hours; under 50 employees.
¹ Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.
² Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

TABLE 102. MANUFACTURING STATISTICS FOR SELECTED ALABAMA COUNTIES BY
SELECTED INDUSTRY GROUPS AND INDUSTRIES, 1972 AND 1977

[Includes counties with 450 employees or more and industry groups and industries with 450 employees or more within counties, except those that would disclose operations of individual companies]

Note: "County" level includes data on number of establishments, total employment, and total payroll for central administrative offices and auxiliaries (for definition, see appendix B).

- Represents zero.

(D) Withheld to avoid disclosing operations of individual companies. (NA) Not available.

(2) Less than 50 thousand dollars or hours; under 50 employees.

¹Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those States where estimated data based on administrative records data account for 10 percent or more of figures shown: E1—10 to 19 percent; E2—20 to 29 percent; E3—30 to 39 percent; E4—40 to 49 percent; E5—50 to 59 percent; E6—60 to 69 percent; E7—70 to 79 percent; E8—80 to 89 percent; E9—90 to 99 percent; E0—100 percent.

²Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

Note: "City" level includes data on number of establishments, total employment, and total payroll for central administrative offices and auxiliaries (for definition, see appendix B).
- Represents zero. (D) Withheld to avoid disclosing operations of individual companies. (NA) Not available. (Z) Less than 50 thousand dollars or hours; under 50 employees.
¹ Payroll and sales data for small single-unit companies with up to 20 employees (cutoff varied by industry) were obtained from administrative records of other government agencies rather than from census report forms. These data were then used in conjunction with industry averages to estimate the balance of items shown for these small establishments. This technique was also used for a small number of other establishments whose reports were not received at time data were tabulated. The following symbols are shown for those industry groups and industries where estimated data percent: E6-60 to 69 percent; E7-70 to 79 percent; E8-80 to 89 percent; E9-90 to 99 percent; E0-100 percent.
² Aggregate of cost of materials and value of shipments for industry groups (2- and 3-digit) and for all manufacturing industries includes extensive duplication, since products of some industries are used as materials by others (see appendix B).

Source: U.S. Department of Commerce, Bureau of the Census, 1977 Census of Manufactures.

TABLE 104. DISTRIBUTION OF MANUFACTURING ESTABLISHMENTS BY EMPLOYMENT SIZE AND MAJOR INDUSTRY GROUPS FOR ALABAMA AND COUNTIES, 1977

Major groups descriptions are: 20--food and 21--tobacco products; 22--tobacco manufactures; 23--textile mill products; 23--apparel and other textile products; 24--lumber and wood products; 25--furniture and fixtures; 26--paper and allied products; 27--printing and publishing; 28--chemicals and allied products; 29--petroleum and coal products; 30--rubber, plastic and miscellaneous plastics products; 31--leather and leather products; 32--stone, clay, and glass products; 33--primary metal industries; 34--fabricated metal products; 35--machinery, except electrical; 36--electric and electronic equipment; 37--transportation equipment; 38--instruments and related products; 39--miscellaneous manufacturing industries.)

and Economic Research, The University of Alabama.

RETAIL TRADE

Retail trade or sales data in this section are from two sources: (1) those compiled and published monthly by the Center for Business and Economic Research (CBER) and (2) those compiled and published by the U.S. Department of Commerce, Bureau of the Census, at five-year intervals (years ending in 2 and 7), the latest one being for the year 1977.

The data by CBER are derived from computer tapes supplied the Center by the Sales Tax Division, Alabama Department of Revenue. The sales data shown, however, are neither taxable sales, nor total sales. Instead, they are "net sales at retail," computed from the following formula: $(\text{gross sales}) - (\text{wholesale sales}) - (\text{interstate sales}) = \text{NET RETAIL SALES}$. The sales in this Abstract are not comparable with those published in prior editions due to the disaggregation of many chain store sales that were heretofore reported in, and therefore credited to, the county where the home office was located. Historical data earlier than 1977 are not available for this new series. The CBER publication, Alabama Business, carries monthly total sales data for the State and for all Alabama SMSAs and counties.

Since these data are secured for the use of a state government tax-collecting agency, whose interests differ substantially from those of the economic researcher, certain deficiencies exist in the data from the business analyst's point of view. In any event, a researcher who plans extensive use of these statistics for a purpose requiring a high degree of accuracy should contact the Center for Business and Economic Research before undertaking such

RETAIL TRADE--CONTINUED

an analysis. It also should be noted that these data differ from retail trade data published by the U.S. Bureau of the Census, in part because of a different classification of firms and in part because of a difference in definition of retail sales.

Retail concerns, as defined by the Alabama Department of Revenue, are those "establishments open to the general public primarily engaged (at least 50 percent of its sales) in selling merchandise for personal or household consumption or utilization, and rendering service incidental to the sale of goods."

All concerns which do not meet the "retail" requirements are placed in a "nonretail" classification. Nonretail concerns fall into four general classifications: Unclassified concerns are those which have not yet been classified or which do not fit into any classification listed; Wholesale concerns are places of business primarily engaged in selling or acting as agents in selling goods on a wholesale basis; Service concerns include personal services, business services, automotive services, and several other groups; Manufacturing concerns are not further defined. However, all concerns in the nonretail group which are included in the tabulations are making--or have made in the recent past--sales "at retail" under the definition of the Alabama Sales Tax Law. Only sales classified "at retail" are included in the sales of retail and nonretail concerns in the tabulations.

RETAIL TRADE--CONTINUED

The more important types of firms found in each category are summarized below.

Retail Concerns:

Food--Grocery stores; dairy products stores; milk dealers; fish markets; meat markets; candy, nut, confectionery stores; delicatessens; fruit stores and vegetable markets; bakeries and caterers; egg and poultry dealers; and other food stores.

General stores with food and gas

General merchandise--Department stores; dry goods stores; general merchandise stores with food; other general merchandise stores; and variety stores.

Apparel--Men's-boys' clothing and furnishing stores; family clothing stores; women's ready-to-wear stores; furriers and fur shops; women's accessory stores; infants' wear shops; custom tailors; men's shoe stores; family shoe stores; women's shoe stores; and other apparel stores.

Furniture, furnishings, and appliances--Furniture stores; floor covering stores; drapery, curtain, and upholstery stores; china, glassware, and metalware stores; interior decorators; antique shops; household appliance dealers; radio-household appliance stores; radio stores; radio-musical instrument stores; and other home-furnishings stores.

Automotive--Motor-vehicle dealers (new and trade-in); motor-vehicle-farm implement dealers; motor-vehicle dealers (retail-wholesale); used car dealers; accessory, tire, battery dealers; motorcycle dealers; aircraft dealers; and motorboat and yacht dealers.

Gasoline service stations

Lumber and building materials--Lumber yards; building materials dealers; heating-plumbing equipment dealers; paint, glass, and wallpaper stores; and electrical supply stores.

Hardware and farm implements--Hardware stores; farm implement-tractor dealers, and hardware dealers.

Eating places--Restaurants, cafeterias, and lunchrooms; lunch counters and stands; and soft drink, juice, and ice-cream stands.

RETAIL TRADE--CONTINUED

Drug stores

All other retail concerns--Drinking places; liquor stores (packaged goods); fuel and ice dealers; fuel oil retailers; hay-grain and feed stores; farm and garden supply stores; jewelry stores; book stores; fish tackle and bait shops; stationery stores; cigar stores and cigar stands; florists; gift, novelty, and souvenir shops; news dealers; office and store appliances; school supply; opticians; photographic supply and camera stores; sporting goods stores; bicycle stores; luggage stores; piano and musical instrument stores; scientific and medical instrument and supply dealers; other retail stores; second-hand stores; office supplies and business machines; and industrial equipment and supplies.

Nonretail and Unclassified Concerns:

Wholesale concerns

Service establishments--Personal services; business services; services allied to transportation; automotive repairs and services; other repair services; custom industries; and miscellaneous services.

Manufacturing

Unclassified and other concerns--Hotels and motels; schools; professionals; transportation; and others.

The tables reproduced from the 1977 Census of Retail Trade, by the U.S. Department of Commerce, Bureau of the Census, suggest the types of data that are available in greater detail in the following volumes derived from this census:

Summary Statistics--Consists of a U.S. summary chapter and separate chapters (presenting statistics by kind of business and geographic areas) for such subjects as sales--size of establishments, single units and multiunits, and employment--size of establishments, and legal form of organization.

Geographic Area Statistics--Consists of a U.S. summary chapter, separate chapters for each state, and the District of Columbia. Statistics are presented by kind of business for counties, cities, and SMSAs. The amount of kind-of-business detail varies in accordance with the number of retail establishments in the area.

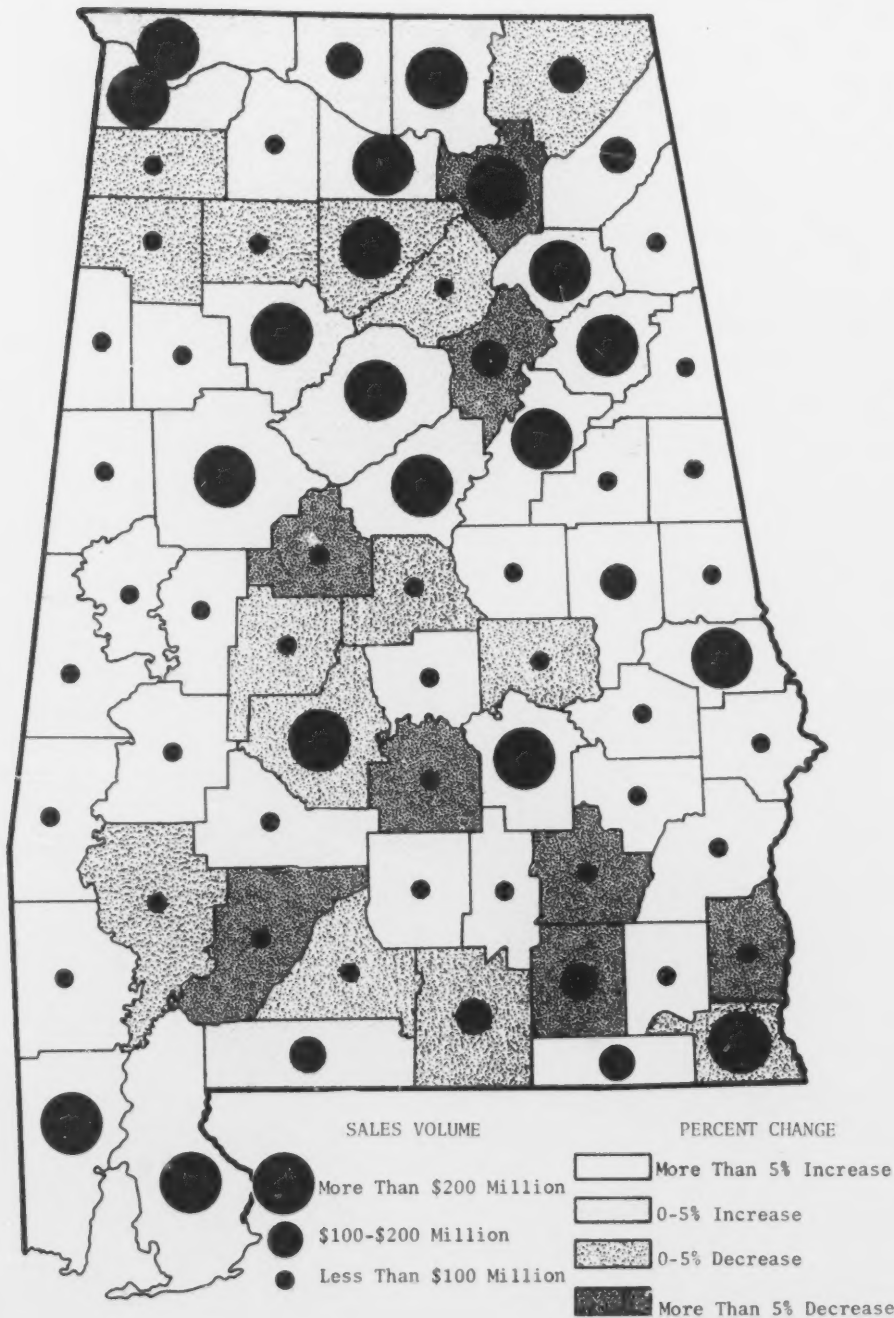

RETAIL TRADE--CONTINUED

Major Retail Centers--Consists of separate reports for each state having one or more SMSAs and the District of Columbia. Includes general statistics (establishments, sales, employment, and annual payroll) by kind of business for each SMSA, central city and other SMSA cities of 50,000 or more inhabitants, central business district, and major retail center (MRC) in the SMSA.

Retail Merchandise Line Sales--A single report for the United States. Data for states, SMSA's, and the area within the state outside of any SMSA are available on microfiche on a state-by-state basis.

Again it should be noted that the data published by the Center for Business and Economic Research and the U.S. Bureau of the Census differ because of a different classification of firms and of a difference in definition of retail sales.

WHOLESALE TRADE

Wholesale trade is defined in the Standard Industrial Classification Manual as "establishments or places of business primarily engaged in selling merchandise to retailers; to industrial, commercial, institutional, farm, or professional business users; or to other wholesalers; or acting as agents or brokers in buying merchandise for or selling merchandise to such persons or companies."

Virtually the only source of wholesale trade data is the Bureau of the Census, U.S. Department of Commerce. Every five years (years ending in 2 and 7) a census is conducted of the wholesale establishments throughout the Nation and, in turn, data are made available for the state, standard metropolitan statistical areas (SMSA), counties, and selected cities. Data from the Alabama portion of the area statistics of the most recent census (1977) are presented in this section.

A brief content description of the Census' major reoccurring wholesale trade publications follows:

Summary and Subject Statistics--Consists of a summary chapter for the United States and separate chapters (presenting statistics by kind of business and geographic areas) for such subjects as size of wholesale establishments, receivables and bad debt losses, sales by class of customer, commodity line sales, legal form of organization, and petroleum bulk stations.

WHOLESALE TRADE--CONTINUED

Geographic Area Statistics--Consists of a summary chapter for the United States, separate chapters for each state, and the District of Columbia. Statistics are presented by kind of business for counties, cities, and standard metropolitan statistical areas. The amount of kind-of-business detail varies in accordance with the number of wholesale establishments in the area.

Wholesale Commodity Line Sales--Presents data for the United States and selected standard metropolitan statistical areas by kind of business for each type of wholesale operation.

FOREIGN TRADE

The principal source of import and export data is the U.S. Bureau of the Census. The import data are compiled by the Census Bureau from the import entry and warehouse withdrawal forms filed with the customs officials; whereas, the primary source of exports are from the Shipper's Export Declarations for shipments leaving the United States which are also filed with the customs officials.

Foreign shipments included in the following pages are for waterborne commerce only and includes three methods of transportation--liner, tanker, and tramp.

Another leading source for both foreign and domestic commerce of the United States by water is Waterborne Commerce of the United States, Corps of Engineers, U.S. Department of the Army. Some of the data from that publication for Alabama's inland waterways are presented in this section and in order to clarify the terminology used in these tables the following definitions are presented.

Definition of Terms:

Imports and exports--These terms apply to traffic between the United States and foreign ports, including the Canal Zone.

Coastwise receipts and shipments--These terms apply to domestic traffic receiving a carriage over the ocean or the Gulf of Mexico.

Internal receipts and shipments--These terms apply to traffic between ports or landings, wherein the entire movement takes place over inland waterways.

FOREIGN TRADE--CONTINUED

Intraport receipts and shipments--Traffic between the several arms or channels of a port.

Local--Movements of freight within the confines of a single arm or channel of a port or within the limits of a port having one project arm or channel (except car ferry, general ferry, and cargoes in transit) are termed "local." The term is also applied to marine products, sand, and gravel taken directly from beds of the oceans, the Gulf of Mexico, and important arms thereof.

Upbound and downbound--These terms are applied to movements within the confines of a river, intracoastal waterway or canal.

Inbound and outbound--Traffic moving from one waterway into another is termed "outbound" in the case of the shipping and "inbound" with respect to the receiving waterway.

Through traffic--Since waterways bearing tonnages neither loaded nor discharged at points thereon are entitled to that traffic, such movements are termed "through traffic."

Passengers--These figures include all passengers arriving and departing by water on the various waterways and channels and at the ports. They are not classified as domestic or foreign travelers.

Ton-miles--The figures on ton-miles are computed by the Corps of Engineers, and each ton-mile figure reflects only the distance each ton of cargo, foreign or domestic, moved on the waterway described in the section for which the figure is reported.

Domestic traffic--The domestic traffic includes all commercial movements between points in the continental United States, between the continental United States and a territory or possession, among the territories and possessions, and between points in each territory or possession.

SELECTED SERVICE INDUSTRIES

Every five years (years ending in 2 and 7) the U.S. Bureau of the Census conducts a census of business establishments engaged primarily in the sale of services as contrasted with the sale of merchandise. This census of service industries, a part of the economic censuses, provides data for the nation, states, standard metropolitan statistical areas (SMSAs), counties, and selected cities on the number of establishments, employees and receipts by kind of business.

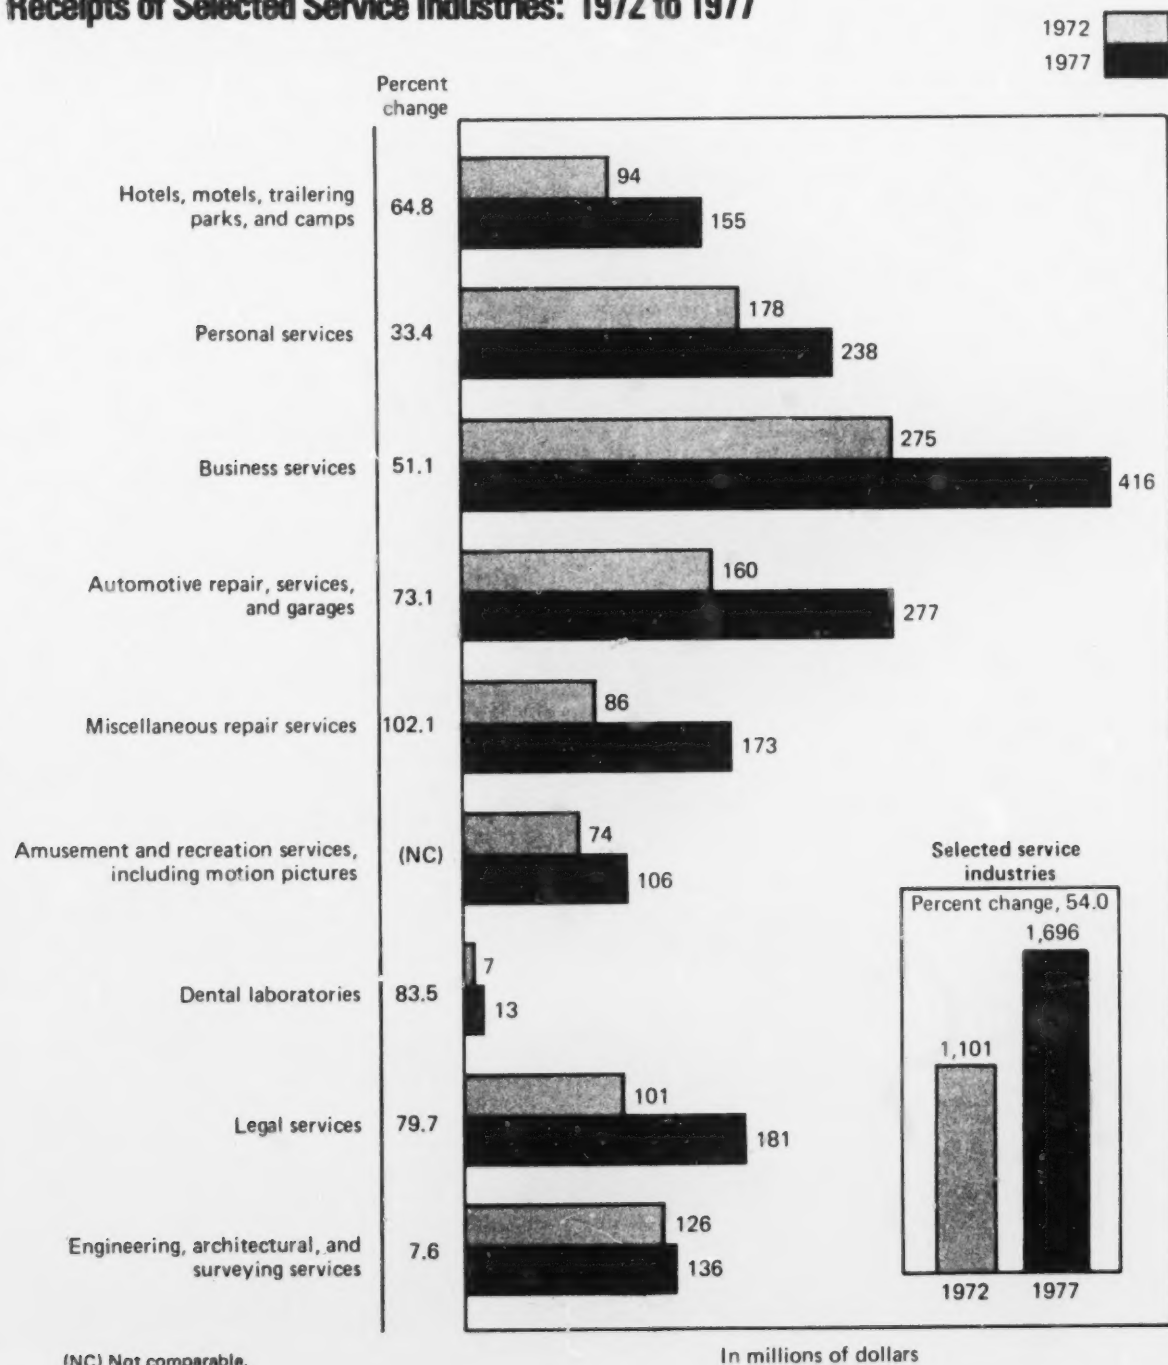

The state and small area data are published in the area statistics volume and reports; whereas, more detailed individual industry data for the United States can be found in the summary statistics volume.

Most of the data in this section has been reproduced from the information collected and published in the 1977 Census of Service Industries.

AGRICULTURE

Since the resources for agricultural data are too numerous to list in this publication only a few of the major ones will be mentioned.

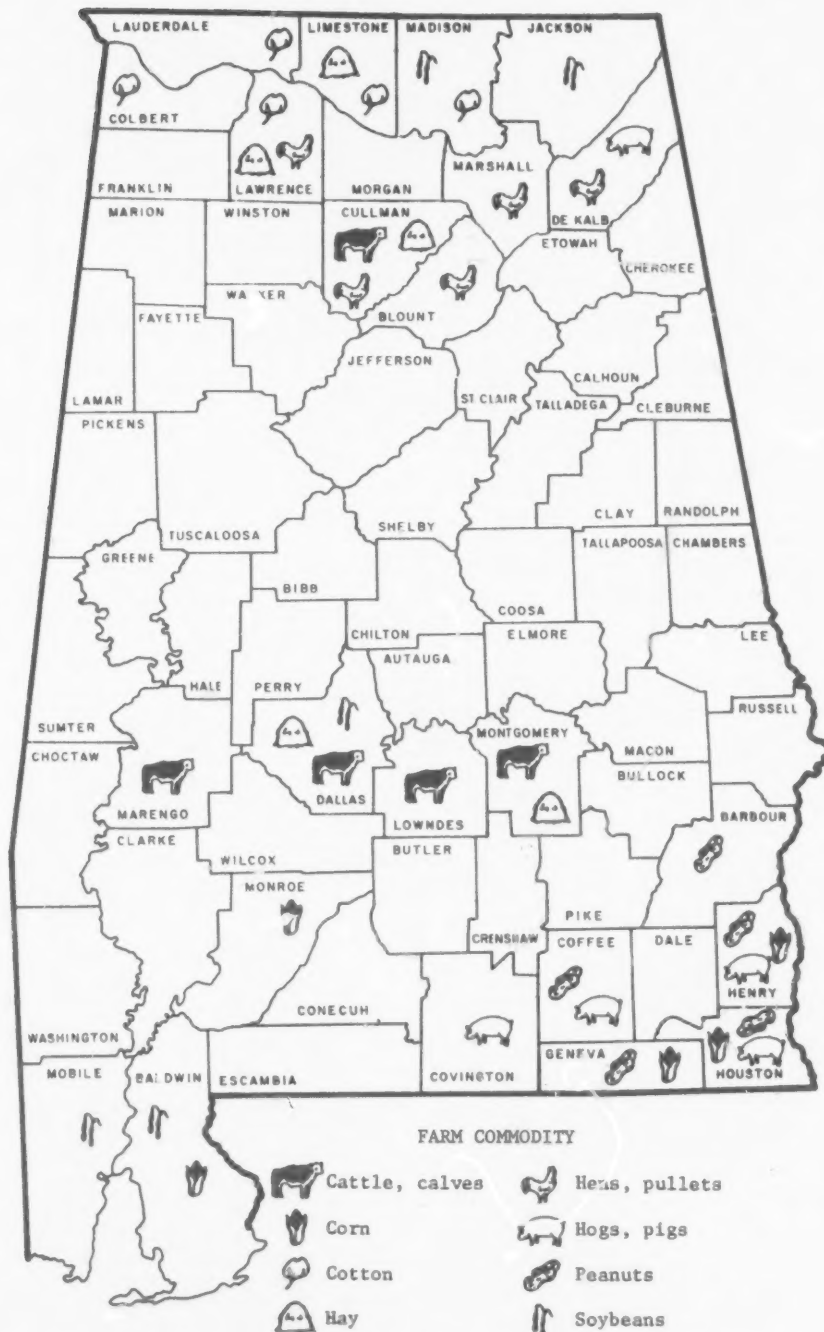

Two of the major governmental organizations involved in the collection and dissemination of information on agriculture are the Bureau of the Census, U.S. Department of Commerce, and the many offices and services of the U.S. Department of Agriculture. Through the cooperation of these two Departments a census of agriculture is taken every five years, the most recent one being in 1978. These censuses are perhaps the most comprehensive source of detailed agricultural statistics.

However, for current information on annual and monthly basis the U.S. Department of Agriculture is the most widely used resource. Innumerable regular and special reports on every product and phase of agriculture are available directly from the Agriculture Department or cooperating agencies located in every state. The agency in Alabama is the Alabama Department of Agriculture and Industries.

One of the divisions of the Alabama Department that collects and publishes current statistical data relating to agriculture is the Crop and Livestock Reporting Service. This service is responsible for many valuable annual, monthly, and periodic releases to the users of agricultural information.

Several other state resources are the Alabama Cooperative Extension Service, State Forestry Commission, and School of Agriculture at Auburn University.
